Art Unit: 1723

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 4-18, drawn to processing assembly, classified in class 494, subclass 45.
- II. Claims 2, and 4-18, drawn to processing assembly, classified class 494, subclass 45.
- III. Claims 19-20, drawn to processing assembly, classified in class 494, subclass 45.
- IV. Claim 22, drawn to a method of manufacturing a processing chamber, classified in class 29, subclass 428.
- V. Claim 23, drawn to a method of processing blood, classified in class 494, subclass 37.

Inventions III and I-II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars recited in claims 4-18 of the subcombinations. The subcombination has separate utility such as in centrifuges not including any tubing integrally connected to the processing container.

Inventions IV and I-III are related as process of making and products made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the carrier could be attached to the processing container after installation of the carrier and container into the centrifugation channel, with, for example, with an adhesive or mechanical fasteners.

Inventions I-III and V are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus could be used to carry out another and materially different process, for example, to separate an oil water emulsion.

Groups IV and V would be examined together.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Savage whose telephone number is (703) 308-3854. This examiner can normally be reached from Monday through Friday from 7:00 AM to 3:30 PM.
